SAFETY REBOOT

JANUARY 2026

What is Safety Reboot?

The CEF's Safety Reboot initiative is running throughout January 2026

The aim is to refocus on key areas of health and safety

Stop what you are doing, gather with colleagues in groups

Take 15 minutes to discuss the chosen topic using the following questions as a guide

Share your pictures on social media #safetyreboot2026

Site Reinduction: Introduction

- Good morning & welcome back.
- We hope you had a good Christmas break and enjoyed some well deserved time off with family & friends
- Over the next few weeks we will be holding a weekly safety discussion as part of the CEF Safety Reboot for 2026.
- This is the first of these discussions and we hope that you take the time to refamiliarize yourself with your surroundings, the site rules and the conditions which were in place before you left to go off for Christmas.

Site Reinduction: Introduction

- Instead of giving a toolbox talk and asking you to listen, we want you to interact and converse with your colleagues to remind yourselves about the tasks at hand before you left and how you will get back into work.
- Take time to have a think about these issues and discuss with your colleagues before going back to work.

Can you remember
the last task you did
on this site before
going off for
Christmas?

Is this something
that you will be
doing now on your
first day back?

Do you need a new risk assessment for the jobs you will be doing this week?

Have you read and revised your previous risk assessment for the jobs you'll be starting back at this week?

Have you got
sufficient plant and
resources with you
to do the work?

Are you aware of your local surroundings on site? Has anything changed in the meantime?

Are you aware of
the emergency
procedures to
safely exit the site if
necessary?

Are you aware of
the ground
conditions?

Is there enough
light to allow you to
work safely?

Have you got the
correct PPE to allow
you to work in the
cold/dark/damp days
at this time of year?

Are you aware of others who might be working in the same vicinity as you? Have you discussed their potential movements with them?

Have you tried, tested and inspected any tools, plant or machinery you will need in the next week? Are they working safely? Do they need repaired or serviced?

Thanks for
getting
involved.

Remember to
use what you
have learned
today
